Job Available: Software Developer / Mentor / Manager / Business partner

Where: Kathmandu, Nepal

When: any time.

Duration: until we say you can leave ;-)   (1 to 10 years considered, long term view a good thing)

Our aims: to serve, to model a way of doing business that reflects our beliefs, and to develop our staff in a wholistic way.

The job: Software developer / business partner to join a company with 4 current shareholders. We produce a product that manages pharmaceutical supply chains in developing countries. We have an office in Kathmandu with about 10 Nepali staff, 5 of whom are regularly coding. Our sister company has an office in New Zealand, and we also have partners in the UK and Australia.

The job would involve some software development work yourself, but with a greater focus on training, mentoring and managing the work of other staff. We work with clients in about 20 countries, planning and designing for the future. We are starting to work more in new technologies (such as React (native) and Node), but have an existing desktop application to maintain and develop too.

The role may involve 2 to 4 weeks a year paid travel to (un)exotic locations in Asia, Africa and the Pacific.

Your own ideas will be valued. We always learn a lot from new people in our organisation, as they bring fresh perspectives- hopefully on life and faith and relationships as well as how to attack technical issues.

The most important qualities we'd need are: sharing our worldview and organisational aims, friendliness, resilience, competence, flexibility.

We can offer flexible work hours if needed, but the job is approximately full time (40 hours a week approx). We provide 4 weeks paid holiday per year, but can also accommodate longer breaks from Nepal if you have other commitments that require this.

Remuneration and living in Nepal: We are able to pay a salary that is more than enough to live on in Nepal and can also cover airfares, school fees and the like. We welcome people seconded from mission agencies and those who aren't. To work with us in Nepal you need to be an investor in our company. We can arrange a loan to facilitate that, and provide administrative support with the process of obtaining a visa.

Learning the local language is important, and we would give time and funding for this in proportion to how long you are planning to stay in Nepal

Support: We visit Nepal several times a year, and have a network of people who can ensure you receive a good orientation and support while in Nepal.

Qualifications: A degree in computer science or equivalent experience.

Contact us: at jobs@yakpost.net and we'll send you some more info about us and about the application process.
