

## Transfer of Ownership

### introduction

Operating since 1999; we registered as a wholly owned foreign company in 2004. Our goal has been to find simple and affordable products that will help the lowest level of farmers, improve their lives and give them a better hope for the future.

As stated earlier; we are an American company registered in China, as a manufacturer of small agriculture machines. Our scope of business activities allows us (in addition to manufacturing), to import and market other agriculture related products; to develop, produce and sell environmental protection tech/equipment, greenhouses and related technology; consulting services; horticulture, seeds, fertilizers etc. Includes a VAT license, plus I-E approval for our own products.

The agriculture scene is changing and life is now better for many, yet there are still needs and opportunities for those with technology and a desire to help.

The owner's age makes maintaining a working visa difficult. We would love to see a suitable person / group with desire and vision to raise the standard of agriculture machinery, services and technology, to be able to get right to work, without dealing with the usual startup issues.

Thank you for your interest. If you have further interest in agriculture here, and in bypassing the startup exercises, feel free to email a brief introduction of yourself/group, your interests, vision and reason for the interest to - [uphilldown@pm.me](mailto:uphilldown@pm.me)
